

HEALTHCARE IT SOLUTIONS

In addition, we have a HIPAA VisionOnline web portal solution, which is a collection of customizable tools to help you automate your compliance workflow and business processes.

Workflow and Business Process Automation

VisionOnline's expertise in healthcare workflow analysis and expert adapting technology distinguishes us from our competitors. The scope of these services includes clinical and financial workflow analysis and automation, business process management solutions, and business performance metrics and performance improvement solutions. VisionOnline deploys advanced data warehousing solutions to enable business intelligence, decision support, and financial reporting solutions throughout the enterprise.

Revenue Cycle Management

Who in your organization operates healthcare as a business? If no one does, your revenue margins may be hurting. Vision-Online solution provides you technology-driven, revenue margin lifting services to create seamless business operations, and a web-based web portal to get reimbursed correctly. The portal will also file claim appeals and help you track short pays electronically.

With healthcare providers and practices seeing their revenue margins shrink, there is a keen need for outside business expertise. VisionOnline Revenue Cycle Management Solutions will analyze your current revenue cycle to determine issues that may be hindering your cash flow and revenue growth, customize and adapt our consulting services and priority technology to meet your unique requirements, create workflow processes to streamline your operation and reduce your expenses, identify specific examples of missed revenue, jointly develop performance metrics, and provide you with a web-based dashboard to monitor key performance indicators in real-time.

ARRA Consulting Services

On February 17, 2009, the U.S. Congress passed the **American Recovery and Reinvestment Act – ARRA 2009 Act**, including a HITECH section. The act includes over \$29 billion devoted to healthcare IT over the next several years.

VisionOnline's Healthcare IT Solutions and Services empowers you to learn about automation opportunities as they affect you and what you need to consider next so that you may begin to act now. From ARRA grant assessment to petition, to award, to solution implementation, Vision-Online offers you an entire HITECH life-cycle solution management process to maximize the benefits of electronic medical records, workflow and business process automation, practice system integration, HIPAA EDI, and revenue cycle management.

EMR

The current state of electronic solutions for medical record practices across the healthcare industry is still evolving and is not yet available in a "one-size-fits-all" option. VisionOnline expert healthcare consulting services will provide an optimal path to the right EMR solution for your organization. From project plan initiation and planning to procurement management and implementation, we work together with your team to formulate EMR detailed requirements and develop vendor selection and implementation strategies. The optimal EMR solution integrates with your existing hospital software practice applications and services, not only as a sharable repository of medical records, but as a source of actionable data points to assist in excellent healthcare service delivery and cost management.

HIPAA

HIPAA Compliance and Information Security consulting service is one of our premier service offerings. Why not off load all or a portion of your security management activities to a VisionOnline HIPAA expert? We offer HIPAA security compliance management and advisory services. One of our consultants will serve as an advisor to your HIPAA steering committee. We will help your IT staff share the workload and improve productivity and cost effectiveness.
